

11. Definindo nome do container

Definindo nome do container

- Podemos definir um nome do container com a flag **--name**;
- Se não colocamos, **recebemos um nome aleatório**, o que pode ser um problema para uma aplicação profissional;
- A flag run é inserida junto do **comando run**;

```
S D:\Docker> docker run -d -p 80:80 --name nginxapp nginx
docker: Error response from daemon: Conflict. The container name "/nginxapp" is already in use by container "e4fc48bc4382a49a7195c6fd7fc0ee0878".
You can not reuse a container name that is already in use by another container.
See 'docker run --help'.
```
